Providing Architects with Greater Residential Design Opportunities

Agway Metals Inc. is committed to providing unparalleled roofing and cladding choices. At Agway we constantly develop profiles capable of fulfilling all of your design requirements. Profiles that deliver edge.

Profiles that stand out. From the highly regarded Springhouse Shingles to the more non-traditional look of Flat Lock and HV-12 profiles. More and more of Agway products are becoming a norm with residential single and multi dwelling design.

Eye catching Colours and Finish. From the weathered look of the A606 or a natural look of Roasted Ash, to a beautiful RHEINZINK appearance, AGWAY has a complete selection of finishes that provide unlimited design choice.

Stratus

Agway Metals' Stratus profile is designed with a traditional look that delivers a more contemporary appearance to the entire project. The Panel projects a sleek and stylish appearance designed to enhance the projects overall look.

Flat Lock

The versatility of the Flat Lock panel allows for very fast and easy installation which makes it very affordable for residential as well as commercial use. Based on a modular panel system Flat Lock delivers a more traditional rectangular design.

HF Profiles

HF profiles continue to be a popular choice among architects for a variety of residential applications. With 5 different styles and no visible fasteners, these panels install easily and deliver the clean, sleek lines of contemporary surfaces.

AR Standing Seam Profile

Agway's AR Standing Seam Profiles offer a raised rigid standing seam at three different depths and an assortment of widths to achieve a variety of contemporary, architecturally pleasing designs. Panels are installed using hidden clips and fasteners that produce wall and roofing cladding that provides clean, crisp lines.

Custom Fabrication

Agway's Custom Fabrication services makes it easy for architects to ignore technical constraints, open their minds and pursue new and exciting directions in unfettered creativity. Specialized machinery, advanced technology and willingness to accommodate any creative design allows Agway to respond to unique requests that would likely meet with roadblocks elsewhere.

Springhouse Shingles

Springhouse Shingles provide a unique and spectacular finish with a traditional appeal. Engineered with a textured finish to look like traditional shingles, Springhouse Shingles offer a rugged and long lifecycle that is entirely maintenance free.

ARCHITECTURAL PROFILES

Rheinzink®

RHEINZINK® is the world's leading brand of architectural-zinc for building applications. Generally known as "titanium-zinc", RHEINZINK is a life-long natural-weathering metal that forms a blue-gray patina after repeated exposure to moisture and air.

Print Series

If you can imagine it, you can express it – RepliKote enables designers to easily and convincingly emulate precious metal finishes, exotic woods, natural stone, or virtually any creative imagery. RepliKote's unique manufacturing technology yields gorgeous pre-finished metals that are totally compatible with conventional fabrication techniques.

Indaten™

With Agway's Indaten Weathering Steel product, you'll be able to deliver a classic, 'weathered' look, with a unique, rust-like appearance that, in the past, could only be accomplished by Mother Nature.

Wrinkle Coat

Wrinkle Coat is an organic, coated steel with a standard paint thickness of 35 or 40 microns. Architecturally attractive aesthetics with a mat finish that provides a unique wrinkled surface finish. The colours present a natural look and feel to the overall project.

Perspectra Plus Series™

Perspectra Plus Series™ is the next generation in our profile paint systems. Perspectra Plus Series is now even more resistant to chalk, fade, chemical degradation and scratching. It uses state of the art Silicone Modified Polyester (SMP) technology and a new resin backbone which provides enhanced performance to end-users.

Metallic / Elite Series

The Metallic Series is a 1-pass, 2-coat process that provides a unique and brighter colour for use in more prestigious applications. This system provides excellent weathering and protective properties.
