DECEMBER 2021

Technical Update

Agway is Kicking HF-12 Up a Notch

Our most popular hidden fastener profile has become more versatile with the introduction of tooling that allows a mechanically cut notch to be cut into one of the panel ends. This notch improves the speed of installation by removing the need to field notch or install an additional transition flashing.

NOTE: NOTCHED LEG TO BE INSTALLED UNDERNEATH THE UNNOTCHED PANEL

Advantages

- Produces a visual architectural effect on installed HF-12 panels
- Removes the time consuming process to hand notch on site
- Mechanical precision ensures consistent/clean lines in the appearance of installed panels
- Removes the need for an intermediate transition flashing

Specifications

Profile(s): HF-12F & HF-12NF

Weight: 22 Gauge Only

Min. Length: 24"

Max. Length: 240"

Notch Length: 1"
